Our role in R&D

What is R&D?

Research & Development

WE ARE THE “AND” IN R&D

R

And other KIF1A researchers /
Collaborators

&

Our Families

D

Who's going to step up?

Biotech / Industry?

Individuals?

Translational Researchers?

How we Accelerate R&D: *Our Jobs*

Be proactive with your data and your story: *Trust the Foundation. Trust the Chung Lab.*

Be active in the rare disease community: *Remember, being present is active.*

Be contactable: *We can't expect urgency if we don't respond with urgency.*

Take video: *What matters most? If we can't capture it, we can't fix it.*

Get Zoom: *We're global. We're strong. We can meet real-time. One mission, one foundation.*

Be relentless: *In your love for our children, for our community, for our science and for yourself.*

Weekly Jobs: Every week we'll email you a job

Our Job Next Week

- Email every biotech with a neuroscience program and tell them we need their help today. Challenge them to “think rare.” The science and technology exists.
- Monday each KIF1A family will receive a list of email addresses and contact information for every biotech and an example message.
